OBJECTIVE

Aspiring Computer Engineer currently in my second year, with strong expertise in Data Structures, Object-Oriented Programming, and backend development fundamentals. Have built fully functional projects and continue to develop solutions focused on real-world problem-solving. Regularly practice DSA and actively participate in hackathons. Passionate about software development and currently learning system design fundamentals through hands-on project experience.

Education

Birla Institute of Technology and Science Pilani, Hyderabad Campus

B.Tech in Computer Engineering

Aug2024–May 2028

GPA: 9.1/10

Wilson College , Mumbai

Aug2022–May 2024

Maharashtra State Board of Secondary and Higher Secondary Education (HSC)

Grade: 87%

St. Johns Universal School, Mumbai

Jun2012–Apr 2022

Indian Certificate of Secondary Education (ICSE)

Grade: 98%

Achievement - Jee Advanced Rank-6324, Jee percentile - 99.58 %ile , CET percentile - 99.94 %ile

Experience

Web Development and AI Intern At KVGAI, Lucknow

Summer Internship | May 2026 to July 2026

- Automated Data Extraction: Engineered a web scraping pipeline for the Civic Info Project using Python and the Serper.dev API to streamline complex data collection workflows.
- AI System Integration: Integrated the Google GenAI SDK into the data architecture to enhance the automated processing, structuring, and analysis of civic information.

PROJECTS

Automatron, Meta AI Hackathon (round 1 qualified)

<https://huggingface.co/spaces/largebunny/Automatron/tree/main>

Mar 2026 - April 2026

- Engineered and deployed Automatron, a Reinforcement Learning agent hosted on Hugging Face Spaces that autonomously navigates and resolves complex DevSecOps security challenges. Built real-time inference APIs and an automated scoring pipeline to systematically evaluate the model's performance and decision-making logic against enhanced security threats. Collaborated within a three-person team to architect the end-to-end system, integrating server-side APIs for real-time model inference and structured logging.

Swarm Robotics

<https://github.com/thekaranparikh/locustMRAWS>

Jan 2026-Now

- Engineered swarm intelligence algorithms to govern autonomous agent behavior in a proactive arena. Successfully modeled complex emergent behaviors—including foraging and collective aggregation—while balancing computational constraints and individual agent autonomy.

Expense Tracker

<https://ps-1-rhythm-bhandari-expense-tracker.vercel.app/auth>

May 2026-Now

- Engineered a full-stack expense management application using React, Node.js, and Supabase, featuring automated budget tracking and PDF report generation. Integrated multimodal AI via Google Gemini to parse natural language expense entries and generate automated categorization insights.

Minor projects

- Developed a scalable, multi-role e-commerce platform featuring secure OTP/OAuth authentication and real-time location integration for optimized logistics. Implemented robust global error-handling middleware to ensure application stability and a seamless, user-centric experience across customer, retailer, and wholesaler interfaces.
- Architected and deployed a private, open-source cloud storage system using Nextcloud.
- Developed an inventory management system.

Skills

- Programming Languages:** C, C++, Java, Python , React, Vite , Node js , SQL
- Core Concepts:** Data Structures and Algorithms, Object-Oriented Programming, Database
- Basics
- Tools:** Git, GitHub, VS Code, Linux (basic)
