

RHYTHM DHEERAJ BHANDARI
Course : **B.E.**, Computer Science Engineering, 2028
Email : f20240141@hyderabad.bits-pilani.ac.in
Mobile : 7400320641
CGPA : 9.24

ACADEMIC DETAILS				
COURSE	INSTITUTE/COLLEGE	BOARD/UNIVERSITY	SCORE	YEAR
CLASS XII	Wilson College, Mumbai	Maharashtra State Board of Secondary and Higher Secondary Education (MSBSHSE)	86.67 %	2024
CLASS X	St. Johns Universal School, Mumbai	ICSE	98.4 %	2022
Subjects / Electives		Database Management Systems, C++ Programming, Derivatives & Risk Management, Discrete Structures in Computer Science, Linear Algebra, Data Structures & Algorithms, Fundamentals of Finance & Accounting, Probability and Statistics, C Programming, Financial Managment, Object Oriented Programming		
Technical Proficiency		Prompt Engineering, Full Stack Development, Web Development, C Programming, Object-Oriented Programming (OOP), DSA, FastAPI, Java, Python, Visual Studio Code, SQL, Git, MySQL, Python3, CSS, Github, JavaScript, Oracle Database, React.js, Competitive Programming, C++ Language, MongoDB, Node.js		
INTERNSHIPS				
Web Dev Intern, KVGAI tech pvt ltd			May 2026 - Jul 2026	
- Engineered a multi-model AI backend service using Python, integrating Gemini to parse financial data and categorize expenses from receipts, improving data processing efficiency. - Developed a responsive React component (DepartmentAnalytics.jsx) featuring interactive dropdown filters and animated data visualizations to compare AI-based vs. human-led grading metrics. - Built a custom web scraper to automate the extraction of unstructured data, accelerating the data collection pipeline and expanding the dataset by over 1000 records.				
PROJECTS				
Resume Screener - WebDev and AI			May 2026 - Present	
- Built a full-stack AI Applicant Tracking System (ATS) using React, TypeScript, FastAPI, and PostgreSQL to parse, rank, and analyze candidates at scale. - Integrated a custom RAG (Retrieval-Augmented Generation) pipeline using Gemini 2.5 Flash, OpenAI APIs, and a local FAISSvector store for interactive candidate resume Q&A. - Developed an automated ATSscoring engine that performs semantic alignment and skills overlap calculations, recalculating scores dynamically when job criteria change. - Implemented secure Google OAuth2 & JWT authentication alongside a responsive React dashboard featuring real-time upload progress tracking and dark mode styling. - Github Link: https://github.com/Rhythm0607/res				
Expense Tracker - WebDev			Apr 2026 - Present	
- Developed and deployed a full-stack application on Vercel using React, Node.js, and Supabase, implementing secure Google Login authentication to streamline user onboarding. - Integrated advanced Generative AI (gemini-2.5-flash) for automated receipt parsing, strategically optimizing prompt logic to achieve data extraction accuracy. - Engineered an automatic categorization and natural language parsing system to instantly classify unstructured transaction data, reducing manual entry time. - Built an interactive frontend dashboard delivering comprehensive monthly insights through dynamic charts and visual budget manager alerts, improving user financial tracking efficiency and also implemented seamless PDF export functionality to download reports in a single click - Github Link: https://github.com/Rhythm0607/ps-1-rhythm-bhandari-expense-tracker Vercel Link: https://ps-1-rhythm-bhandari-expense-tracker.vercel.app/auth				
E commere Website - WebDev			Sep 2025 - Oct 2025	
- Developed a scalable, multi-role e-commerce platform featuring tailored interfaces for customers, retailers, and wholesalers, supporting a seamless flow. - Integrated secure OTP/OAuth authentication protocols to protect user data and streamline onboarding, reducing login friction. - Engineered a real-time location integration system to dynamically surface nearby storefronts, actively promoting local shopping and increasing community vendor visibility. - Implemented robust global error-handling middleware to guarantee application stability, and maintain a smooth, user-centric experience across all roles				
COMPETITIONS				
Meta AI Hackathon			Apr, 2026	
- Architected an open-environment sandbox for AI agents to autonomously detect and patch security vulnerabilities across 3 distinct tiers. - Enforced strict data validation and parsing between agent nodes using Pydantic, ensuring deterministic outputs. - Bridged DevSecOps and AI by creating a controlled testing environment for automated threat remediation.
